

Rooting®

Professional Rooting Hormone

Active Ingredient:

Indole-3Butyric Acid (IBA)

Product Description

ROOTING® is a high-quality rooting hormone formulated to stimulate rapid root initiation in woody and herbaceous plant cuttings. It encourages uniform root development, improves transplant establishment, and increases propagation success.

Softwood Cuttings - Because tissues are tender, they require lower concentrations viz Coleus, Tomatoes, Herbs, Evergreen Shrubs, Broadleaf Evergreens etc.

Semi-Hardwood Cuttings - viz Conifers & Woody Ornamentals

Hardwood Cuttings - These are harder to root and require the strongest concentrations - Tropical Trees & Fruit Rootstocks

Key Benefits

- Promotes fast root initiation.
- Encourages strong, healthy root systems.
- Improves survival of transplanted cuttings.
- Suitable for both softwood and semi-hardwood cuttings.
- Easy-to-use dustable powder formulation.
- Enhances propagation success and plant vigor.

Recommended Crops

Roses, Carnations, Ornamentals,
Fruit trees, Forestry seedlings,
Shrubs and Nursery plants

Procedures

Features

Available: 25DP, 40DP, 60DP and 100DP

Also Available in: 50 SL

Directions for Use

- Select healthy disease-free cuttings.
- Slightly moisten the basal end of the cutting.
- Dip the cut end into **ROOTING®** powder / liquid Concentrate.
- Tap gently to remove excess powder.
- Plant immediately into a suitable rooting medium.
- Maintain adequate moisture and humidity until roots develop.
